

Network Camera Surveillance Powerhouse Secures Your Property

RFC Services is proud to announce the release of Visual Hindsight, network camera surveillance and recording desktop software that allows you to monitor your business or home over a local area network or the Internet. Award-winning Visual Hindsight includes professional-grade features at an entry-level price, and is ideal for unattended monitoring of convenience stores, gas stations, day care centers, retirement facilities, hospitals, laboratories, commercial property, private homes, and more.

Montreal, Quebec (PRWEB) June 28, 2004 -- RFC Services has released v. 1.01 of Visual Hindsight Professional Edition, a Windows NT, 2000, 2003 Server, and XP program that offers professional-grade network camera surveillance and recording for the Desktop Video Surveillance domain.

This latest version of Visual Hindsight supports virtually all network cameras and video servers capable of producing industry-standard JPEG still images or Motion-JPEG image streams, including cameras and video servers manufactured by Axis, D-Link, ELMO, Flexwatch, Hunt, IDView, IQinVision, JVC, Orite, Panasonic, PDuke, Pixord, Sony, Toshiba, TLC Watch, Vivotek and more. It allows real-time viewing of up to 100 cameras and video servers while simultaneously recording up to 50 live video streams directly to disk as compressed AVI files.

Visual Hindsight operates in single or multi-user mode; in multi-user mode, it provides a shared URL database and support for concurrent users, and offers operator logon access to control URL modification and viewing privileges. A database engine that incorporates a 160-bit encryption algorithm ensures data integrity and security.

Other functions include a Retention Monitor™ for optimal use of recording disk space, automatic reconnection of dropped connections, automatic record-on-connect, and motion-detection recording. User interface languages include English, French, Italian and Spanish, with support for dynamic switching between languages during program operation.

Visual Hindsight Professional Edition is ideal for monitoring convenience stores, gas stations, day care centers, retirement facilities, hospitals, laboratories, commercial property, private homes and more. Whether you're a security manager responsible for monitoring access to multiple sites, a school administrator who needs to ensure unauthorized people cannot gain access to your campus, or anyone interested in monitoring their business or their home, Visual Hindsight is a powerful, easy to use and affordable desktop video surveillance and recording solution.

Visual Hindsight is immediately available at only \$199 US, and requires Windows NT, 2000, 2003 Server, or XP running on a PIII 450 MHz or greater at 800 x 600 x 16/32bit video resolution. A free, fully functional trial version is available for download from the Visual Hindsight web site at <http://www.visualhindsight.com/download.htm> .

ABOUT RFC SERVICES

RFC Services was founded in 1994 and incorporated under Canadian law in Montreal, Quebec the following year by owner operator Robert Ferraro.

RFC Services has over a decade of experience as an IT consulting and software development firm, and for the

last several years has specialized in the domain of security, biometric access-control and video surveillance.

Recent projects include PARCIM™, a Point-Of-Sale and Revenue Management System for the parking lot industry, HandAccess™, a SQL-based biometric access control application developed for Recognition Systems® patented hand geometry technology, and the award-winning Visual Hindsight™ product line, for network camera and video server surveillance and recording.
